# RESPONSIBLE MAINTENANCE

with unique technologies

In an attempt to develop a more holistic system that focuses on healthy landscapes, Grant's Gardens promotes sustainable and maintainable landscapes.

Sustainable landscapes is as much a change in attitude as a change in technique. Not only does it emphasize Turf and Plant health over pest management, it takes an ecosystem approach that emphasizes working with nature instead of fighting nature; it sees proper culture as the foundation of a healthy landscape.

Our landscape gardening service offers turnkey comprehensive maintenance in the following areas:

## **Maintenance Services**

- Irrigation Management
- Fertilization Management
- Mulching
- Pruning
- Vine trellising
- Low-Voltage Landscape Lighting
- Seasonal color installation and maintenance
- Landscape pest control
- Water feature Design/Maintenance
- Containers, vessels, urns and pot maintenance

### Lawn / Turf Management:

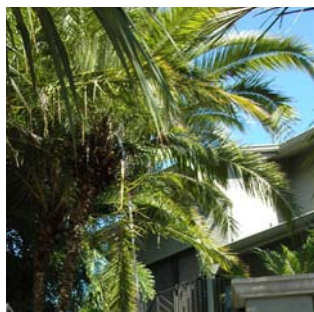

- » Keep fertilizer nutrients in the soil and prevent leaching
- » Controlled release fertilizer ensures precise release of nutrients to the plants
- » Allows plants and turf to use the nutrients before leaching occurs
- » Other synthetic fertilizers leach because they release nutrients faster than plants use them
- » Excess nitrates and phosphates can pollute our rivers, lakes and wells
- » Improve nutrient and water holding capacity thereby reducing excessive watering
- » Gypsum is added to soil to improve turf growth and health
- » Improved plant color, growth, and health are long lasting because nutrients are released slowly

### Plant & Palm Management:

We look at the basic cultural problems afflicting plants:

- » Over watering
- » Poor drainage
- » Planted too deep
- » Drought stress
- » Winter damage

“Having a bachelors degree in Horticulture and being a certified Arborist, Grant Beatt knows the importance of, as well as the “how-to” accomplish sustainable landscaping which results in reduced nutrient pollution.

With the support of a well trained and certified staff of landscape professionals, Grants Gardens have made a commitment to aggressively follow Best Management Practices to do their part in helping to preserve our natural resources.

With Grants vision and innovations, they are creating a healthy environment for all of our futures.” - Ed Rosenthal, CEO Florikan ESA
